Discover the world of geometry with these worksheets for 1st-grade students. These 10 worksheets will teach children about the defining attributes of common shapes and how to draw them in two dimensions. Practicing these basic geometry skills will prepare your student for more advanced mathematics in the grades ahead. Deb Russell Print the PDF Learn to distinguish between squares, circles, rectangles, and triangles with this worksheet. This introductory exercise will help young students learn to draw and identify the basic geometric forms. Deb Russell Print the PDF Can you guess the mystery shapes with these clues? Find out how well you can remember basic forms with these seven word puzzles. Deb Russell Print the PDF Practice your shape-identification skills with some help from Mr. Funny Shape Man. This exercise will help students learn to distinguish between basic geometric shapes. Deb Russell Print the PDF Find the shapes and color them in! This worksheet will help youngsters practice their counting skills and their coloring talent while learning to distinguish shapes of various sizes. Deb Russell Print the PDF Each of these 12 animals is different, but you can draw an outline around each of them. First-graders can work on their shape-drawing skills with this fun exercise. Deb Russell Print the PDF Cut and sort basic shapes with this fun hands-on activity. This worksheet builds on early exercises by teaching students how to organize shapes. Deb Russell Print the PDF Find all the triangles and draw a circle around them. Remember the definition of a triangle. In this exercise, youngsters must learn to distinguish between real triangles and other forms that merely resemble them. Deb Russell Print the PDF Time to explore the classroom with this exercise. Take a look around your classroom and look for objects that resemble the shapes you've been learning about. Deb Russell Print the PDF This worksheet gives students a chance to get creative as they use their knowledge of geometry to create simple drawings. Deb Russell Print the PDF This final worksheet will challenge youngsters' thinking skills as they use their new geometry knowledge to solve word problems. Being in college means you've already aced your SATs, taken all the college prep classes and filled out myriad applications to secure your place. Armed with all that experience, you can help current high school students achieve their college dreams.It was just after graduating from Mas-sachusetts Institute of Technology with a bachelor's degree that Christine Ortiz, now 25, moved back home and started tutoring high school students in her neighborhood. After starting a graduate program at the University of Central Florida, where she is earning a master's in education, she envisioned a whole space devoted to learning. In fall 2007, she started The Knowledge Lab, a tutoring center in Longwood, Florida. Ortiz created a space with comfortable couches, custom murals and a refrigerator full of snacks to welcome students who come to her after-school SAT prep classes and help sessions on subjects like calculus and chemistry. Set to graduate herself next month, Ortiz knows how to navigate the college prep and application process--and shares with students what she wishes someone had shared with her. Positive testimonials from happy students and parents are now one of Ortiz's best marketing tools. She created a street team to talk up her business to high school kids at sporting events and the like. She also markets her business to guidance counselors as a way to get referrals. The K-Lab projects revenue of about \$75,000 for its first full year in business. "I'm trying to create the kind of environment where kids want to come, they love the people who work there and they get along with the other kids," she says. "It feels like they're just hanging out and they happen to get their work done while they're [here]." Word-of-mouth marketing and networking within your community is key to getting student clients for your college prep and tutoring business, says William H. Crookston, professor of entrepreneurship at the University of Southern California's Lloyd Greif Center for Entrepreneurial Studies. Go to PTA events or counselor events to get your business's name out there. And know what your services are worth. "Write a price list schedule," says Crookston. "And ask for [payment] before you perform the services." If you plan to grow your college prep and tutoring business, you'll want to hire a fleet of tutors. Depending on your needs, you may want to search for employees or independent contractors--but make sure you get a federal tax ID number so you can send out official 1099 or W-9 forms come tax time.Building out a huge network of tutors--more than 700--has helped Greg Zumas, 31, and Richard Enos, 32, grow their tutoring service, StudyPoint Inc., to 10 cities. Starting in Boston in 1999, Zumas, then a Cornell University student, and Enos, a Cornell graduate, quickly brought in nearly 20 tutors their first fall season. "Ninety-nine percent [of our success] is based on who's going out and working with the kids. We still spend a lot of time and money [on recruiting and training] and are very selective on instructors," says Zumas, who projects company sales to hit more than \$6 million this year. When it comes to teaching first-grade students the common core standards of mathematics, there's no better way to practice than with worksheets geared toward repeatedly applying the same basic concepts such as counting, adding and subtracting without carrying, word problems, telling time, and calculating currency. As young mathematicians progress through their early education, they will be expected to demonstrate comprehension of these basic skills, so it's important for teachers to be able to gauge their students' aptitudes in the subject by administering quizzes, working one on one with each student, and by sending them home with worksheets like the ones below to practice on their own or with their parent. However, in some cases, students may require additional attention or explanation beyond what worksheets alone can offer—for this reason, teachers should also prepare demonstrations in class to help guide students through the coursework. When working with first-grade students, it's important to start from where they understand and work your way up, ensuring that each students masters each concept individually before moving on to the next topic. Click on the links in the rest of the article to discover worksheets for each of the topics addressed. One of the first things first graders have to master is the concept of counting to 20, which will help them quickly count beyond those basic numbers and begin to understand the 100s and 1000s by the time they reach the second grade. Assigning worksheets like "Order the Numbers to 50" will help teachers assess whether or not a student fully grasps the number line. Additionally, students will be expected to recognize number patterns and should practice their skills in counting by 2s, counting by 5s, and counting by 10s and identifying whether a number is greater than or less than 20, and be able to parse out mathematical equations from word problems like these, which may include ordinal numbers up to 10 In terms of practical math skills, the first grade is also an important time to ensure students understand how to tell time on a clock face and how to count U.S. coins up to 50 cents. These skills will be essential as students begin to apply two-digit addition and subtraction in the second grade. First-grade math students will be introduced to basic addition and subtraction, oftentimes in the form of word problems, over the course of the year, meaning they will be expected to add up to 20 and subtract numbers below fifteen, both of which won't require the students to re-group or "carry the one." These concepts are easiest understood through tactile demonstration such as number blocks or tiles or through illustration or example such as showing the class a pile of 15 bananas and taking away four of them, then asking the students to calculate then count the remaining bananas. This simple display of subtraction will help guide students through the process of early arithmetic, which can be additionally aided by these subtraction facts to 10. Students will also be expected to demonstrate a comprehension of addition, through completing word problems that feature addition sentences up to 10, and worksheets like " Adding to 10, " " Adding to 15, " and "Adding to 20" will help teachers gauge students' comprehension of the basics of simple addition. First-grade teachers may also introduce their students to a base-level knowledge of fractions, geometric shapes, and mathematical patterns, though none of them are required course material until the second and third grades. Check out "Understanding 1/2," this "Shape Book," and these additional 10 Geometry worksheets for late Kindergarten and Grade 1. When working with first-grade students, it's important to start from where they are. It is also important to focus on thinking concepts. For instance, think about this word problem: A man has 10 balloons and the wind blew 4 away. How many are left? Here's another way to ask the question: A man was holding some balloons and the wind blew 4 away. He only has 6 balloons left, how many did he start with? Too often we ask questions where the unknown is at the end of the question, but the unknown can also be put at the beginning of the question. Explore more concepts in these extra worksheets:
